

(••) WIRELESS DETECTORS (••)

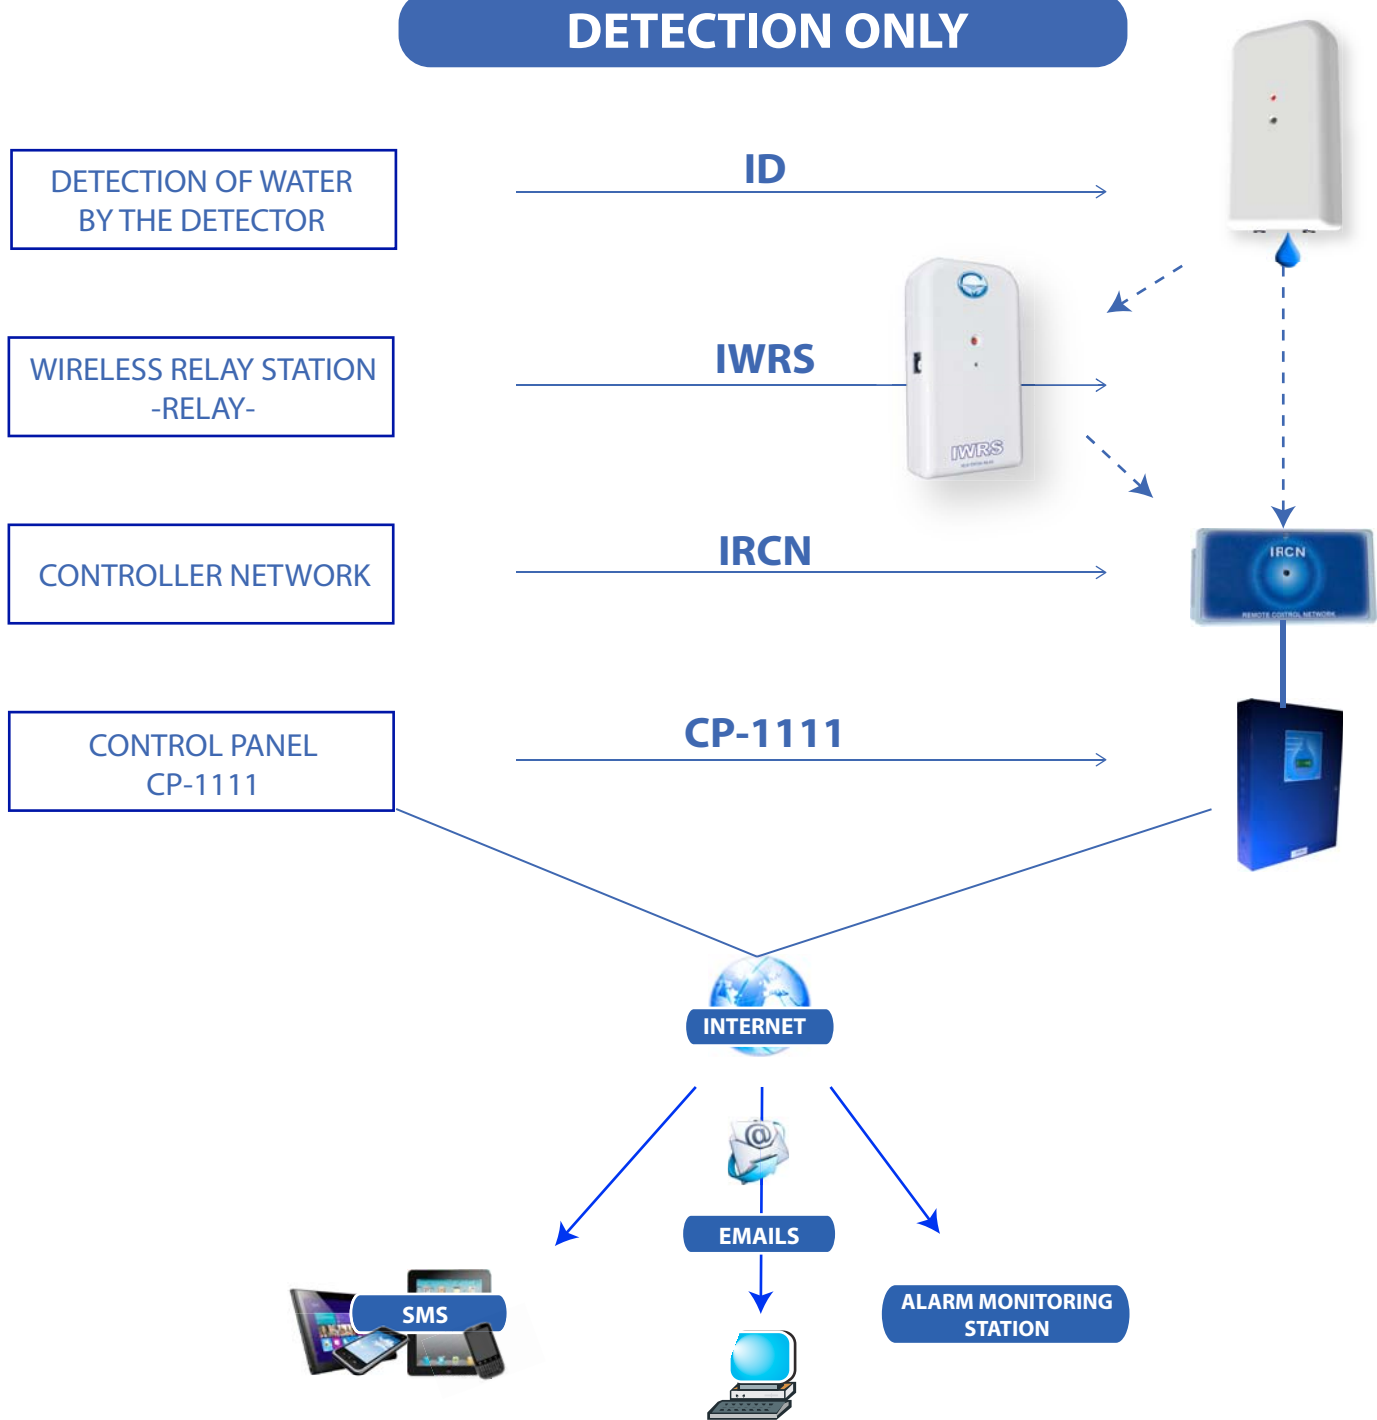

Intelligent detectors -battery operated - ID

GLOBAL SUPERVISION

COMMUNICATION STRUCTURE

DETECTION ONLY

The global supervision of a building is provided by a group of intelligent wireless detectors (ID) that communicate constantly with their respective controller (IRCN). The Relay Station modules (IWRS) can be added if a larger network coverage area is needed. All IRCN are hardwired linked to the Control Panel (CP-1111) that handles all the alarms (détection, linkfault etc.) according the established parameters.
